SUMMARY

Motivated Computer Science and Business Systems undergraduate with a strong foundation in Machine Learning, Web3, and Mobile Application development. Proficient in Python, Rust, TypeScript, C++ and Dart, with hands-on experience building AI agents, decentralized applications, and interactive mobile interfaces. Google Cloud certified in Machine Learning, passionate about leveraging data and modern frameworks to build scalable, intelligent solutions.

EDUCATION

- | | |
|---|--|
| <ul style="list-style-type: none">• Nitte Meenakshi Institute of Technology
<i>Bachelors of Engineering in Computer Science and Business Systems; CGPA: 8.13</i>• The Aryan International School
<i>12th Boards Percentage: 76%, 10th Boards Percentage: 90%</i> | <div>Bengaluru, Karnataka
2024 – 2028</div> <div>Varanasi, Uttar Pradesh
2009 – 2023</div> |
|---|--|

SKILLS

- **Languages:** Python, C,C++,Dart, JavaScript(Basic),TypeScript(Basic),Rust
- **Database:** MongoDB, APIs, SQL
- **Concepts:** API Integration, DSA, Mobile App Development, Blockchain
- **Tools & Platform:** Android Studio, Git ,VS Code, Git Hub,Jupyter Notebook
- **Soft Skills:** Communication, Adaptability, Leadership, Team Work

PROJECTS

- **SolSwap:** ~February, 2026
 - A dual-interface decentralized exchange (DEX) ecosystem featuring a React web application and a Node.js Telegram bot. Architected a non-custodial token swap platform, demonstrating a deep understanding of Solana's account model, RPC node communication, and transaction lifecycle by securely integrating Jupiter APIs for optimal trade routing and low-latency execution.
 - Aggregated liquidity across **50+ Solana DEXs** via Jupiter API to ensure **<1% price impact**, achieving **400ms–600ms** transaction confirmation with **100% client-side key security** via bs58
 - Tech Stack: React 18, Node.js, Vite, @solana/web3.js, grammy, bs58
 - GitHub Link: <https://github.com/Anshul0310/SolSwap>
- **Solana Web Wallet:** ~November, 2025
 - A modern, geometric-styled web wallet for the Solana blockchain. Built with React, Vite, and TypeScript.
 - Optimized performance using Vite to reduce dev server start times by **80%**, implemented **BIP-39 mnemonic recovery**, and maintained a lightweight **<200KB bundle size** for mobile-first loading.
 - Tech Stack: Frontend: React, TypeScript, Vite, Styling(Vanilla CSS), Blockchain: @solana/web3.js, Cryptography: bs58, bip39
 - GitHub Link: https://github.com/Anshul0310/Solana_Wallet
- **Weather Forecast Agent:** ~October, 2025
 - An intelligent Weather Forecast Agent built with Pydantic AI for structured data modeling, real-time weather retrieval, and natural language responses
 - Leveraged Pydantic AI to ensure **100% type-safety** and data validation for API responses, enabling natural language weather summaries in **<1.5 seconds** without runtime crashes.
 - Tech Stack: Python, API Key of Pydantic AI, Jupyter Notebook
- **Ecommerce App:** ~April, 2025
 - A sleek, dark-themed sneaker shop built with Flutter, featuring a custom "Batman" aesthetic with glassmorphism effects and smooth animations.
 - Tech Stack: Flutter & Dart, State Provider(State Management), Google Fonts, Glassmorphism
 - GitHub Link: https://github.com/Anshul0310/ecommerce_app

CERTIFICATIONS & ACHIEVEMENTS

- **Technex '25 Hackathon(IIT BHU):** Selected to compete in the Eco Hackathon challenge, applying computer science principles to engineer scalable solutions for real-world environmental issues.
- **Professional Machine Learning Engineer** – Google Cloud
